Science NetLinks has a very nice lesson plan for a similar activity entitled Radioactive Decay: A Sweet Simulation of a Half-Life Science House has a template for Radioactive Decay of Cadium Tea Antarctica and the Arctic has an activity entitled The Dating Game that actually has the students apply what they are learning to a real problem.

### Radioactive Decay: A Sweet Simulation

Predict what happens to an element when it undergoes alpha decay. Explain the concept of half life, including the random nature of it. Begin to gain an understanding of the forces that work together (strong nuclear force) and the forces that work to break it apart (Coulomb, i.e. electric charge, force).

### Radioactive Decay: A Sweet Simulation of Half-Life

Students will enjoy using M and M's to simulate radioactive decay in this activity from Science NetLinks. This lab demonstrates that the rates of decay of unstable nuclei can be measured, that the nucleus will decay cannot be predicted, and that it takes a very large number of nuclei to find the rate of decay.

This simulation allows you to address, using three different isotopes, notions like radioactive decay, carbon dating, half life constant. Click on one of the three isotopes to select a half-life constant decay.

### Radioactive Decay: A Sweet Simulation of a Half-life ...

Radioactive Decay: A Sweet Simulation of Half-Life Introduction Radioactive decay rates are measured in half-lives. A half-life is the time required for one half of a radioisotope's nuclei to decay in an example, the half-life of the radioisotope strontium-90 is 29 years.

Radioactive pennies - B4204: Ms. Yang

dice come in whole numbers about 16 or 17 dice would be removed. If 17 are removed from the original 100, there would be 83 remaining. One could then predict in the next roll that the number the 5 face up would be  $\frac{1}{6}$  (83) or 13.8. Thus the rate of decay is constant and can be used to simulate radioactive decay.
