Official ray tracing will eventually be supported, yes. It will not support RTX most likely ever as that is Nvidia's proprietary tech and Stadia uses AMD. AMD will most likely come out with its own solution soon though.

Ray Tracing The Rest of Your Life in OptiX - João Vítor Silva

Ray tracing through RTX allows designers to see how lighting, shadows and reflections interact in the virtual space, enabling them to create more accurate 3D textures and environments. It can calculate the position of the light, down to the photon level, as that light interacts and bounces off materials and surfaces.

In fact, because ray tracing is so computationally intensive, it's often used for rendering those areas or objects in a scene that benefit the most in visual quality and realism from the technique, while the rest of the scene is rendered using rasterization.

### Stadia and ray tracing : Stadia

If you want to do high-performance ray tracing, look first at papers from Intel and NVIDIA. Again, they are surprisingly open. If you want to do hard-core physically-based renderers, convert your renderer from RGB to spectral. I am a big fan of each ray having a random wavelength and almost all of the RGBs in your program turning into floats.
