Everyday Examples of Situations to Apply Quadratic Equations  
The fundamental device in the application of calculus to the real world is the differential equation, which relates the change in the conditions of an object to (for example) the forces acting on them.

Real World Examples of Quadratic Equations  
Solve quadratic equations by inspection (e.g., for  $x^2 = 49$ ), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as  $a \pm bi$  for real numbers  $a$  and  $b$ .

How are quadratic equations used in the real world - Answers  
A ball is shot into the air from the edge of a building, 50 feet above the ground. Its initial velocity is 20 feet per second. The equation  $h = -16t^2 + 20t + 50$  and I'm guessing  $h$  is for height-- is equal to negative 16t squared plus 20t plus 50 can be used to model the height of the ball

after  $t$  seconds.
