## Pterosaurs: Flight in the Age of Dinosaurs

Even so, we have thousands of specimens representing around 100 species (though this is still about 1/10th of the dinosaur fossil record). However many pterosaur fossils are from exceptionally well preserved fossil beds and thus are known with skin, beaks, claws, wings and other soft tissues preserved, and not just bones.

Reconstructing a Fossil

Pterosaur Background:

Imagine looking up to see a fur-covered creature gliding through the air on wings longer than the wings of a small airplane. This creature, a pteranodon (t? ran'? don'), might have been a common sight during the Cretaceous, soaring from cliffs on its graceful sail like wings.
