Solutions for a Renewable-Powered Future

Renewable energy is energy that is collected from renewable resources, which are naturally replenished on a human timescale, such as sunlight, wind, rain, tides, waves, and geothermal heat. Renewable energy often provides energy in four important areas: electricity generation, air and water heating/cooling, transportation, and rural (off-grid) energy services.

Center for Resource Solutions | Advancing Sustainable Energy

Renewable energy costs have fallen significantly and rapidly since 2007, based on dramatic improvements in the cost-competitiveness of renewable-based power generation technologies. With this increasingly favourable cost equation, the world's shift to a sustainable energy future based on renewables makes sense in purely economic terms.
