Engine Stages / Streetporting / Bridgeporting / Coolant Mods / Eccentric Shaft / Rotor Clearancing Cryogenics / Engine Coatings / Extrude Hone / Urethane Motor Mounts / Sonic Cleaning. RotorSports Racing offers custom built rotary engines for all applications from stock to performance street to full race turbo engines.

Mazda 13B, 13B-T, 13B-REW Rotary Engine Specs, Oil ...

A rotary engine uses a triangular-shaped rotor to divide the space inside the engine, enabling a standard four-stroke cycle of intake, compression, ignition and exhaust. The moving rotor transports fuel to the various engine compartments for each leg of the cycle. In this way, it resembles a reciprocating piston engine.

RotorSports Engines

The rotary engine is different. The engine rotor rotates at 1/3 the speed of the crankshaft. On two rotor engines, front and rear rotors are 180 ° offset from each other. Each rotation of the engine (360 ° ) will bring two faces through the combustion cycle (the torque input to the eccentric shaft).

full test, I'm left in no doubt as to why!" Paul Harrington, Mazda RX-7 Rotary Rager! Motor Manual 6/1979 This site is a work in progress.

### 13B Engine Specs | It Still Runs

Mazda 13B Engine Problems and Reliability. Rotary engines are not practical for a daily driver period. The cars with 13B are not best in fuel economy, require more care. There is a reason those engines are used in the racing primary where durability isn't the critical factor. But the 13B can be as reliable as a piston engine.

The Mazda RX-8 is a sports car manufactured by Japanese automobile manufacturer Mazda between 2002 and 2012. It was first shown in 2001 at the North American International Auto Show. It is the successor to the RX-7 and, like its predecessors in the RX range, it is powered by a rotary Wankel engine. The RX-8 was available for sale in North ...

### Rotary Engine Specifications - Rotary Engine Wiki

Rotary Basics Both the piston engine and the rotary engine have a space in which a fuel/air mixture is inhaled, compressed and set afire, and exhaled. The piston engine does it by moving the piston up and down within the same space; drawing in the fuel/air mixture, compressing and igniting it then pushing the exhaust gases out.
