Salamander - Internal Anatomy

Mudpuppy Dissection The common mudpuppy, *Necturus maculosus*, is a member of the Caudata, which together with Anura (frogs and toads) and Gymnophiona (caecilians or apodans) form the Lissamphibia. The Caudata, including the salamanders and newts, are the least specialized amphibians in the body form and locomotion.

Salamanders -- identification guide -- Discover Life

Some amphibians, especially salamanders, become adults without ever outgrowing the last larval stage. They retain their gills instead of developing lungs, but do have the ability to reproduce. This is called neotony, and can be caused by environmental factors like a lack of iodine. Reptiles & Amphibians Science Projects Snake Dissection
