Red Hot Chili Peppers - Scar Tissue Lyrics | Genius Lyrics

A scar is an area of fibrous tissue that replaces normal skin after an injury. Scars result from the biological process of wound repair in the skin, as well as in other organs and tissues of the body. Thus, scarring is a natural part of the healing process. With the exception of very minor lesions, every wound results in some degree of scarring. An exception to this are animals with complete regeneration, which regrow tissue without scar formation. Scar tissue is composed of the same protein as

Scar Tissue - Wikipedia

Internal scar tissue occurs when injury or disease affects the body. Pain and inflammation may present itself with internal scar tissue, and depending on where it is located, may restrict body movements. Therapies are available to get rid of and treat internal scar tissue.

Scar Tissue | Definition of Scar Tissue by Merriam-Webster

In the hand, there are many tendons which have to glide under the skin. If these tendons are caught in scar, the tendon does not move as far a distance as it needs to move, thus the joint can't move as much as it should. By using massage as a treatment for scar tissue, you can improve the range of motion of a joint.

Scar Tissue Management in Physical Therapy

Scar tissue forms during the healing process as the body produces collagen fibres to close and heal a wound. These collagen fibres do not grow in the same, consistent direction, and therefore are discoloured and can have an uneven texture. A scab forms over the wound to protect the area from germs.
