Section 36-1 To retain their shapes, all organisms need some type of structural support. Unicellular organisms have a cytoskeleton that provides structural support. In multicellular animals, support is provided by some form of skeleton, including the external exoskeletons of arthropods and the internal endoskel-

Section 36-1 The Skeletal System

Section 36-2 During muscle contraction, the knoblike head of a myosin filament attaches to a binding site on actin, forming a cross-bridge.

Powered by ATP, the myosin cross-bridge changes shape and pulls the actin filament toward the center of the sarcomere. The cross-bridge is broken, the myosin binds to another site on the actin filament, and the
