Introduction to Signal Processing

We design system-level solutions to clinical problems, working from scanner sequencing to signal and image processing. We develop technologies that push the limits of ultrasound image quality: swept synthetic aperture imaging, adaptive clutter reduction, advanced beamforming, and more.

Chapter 4 focuses on FIR filters and its purpose is to introduce two basic signal processing methods: block-by-block processing and sample-by-sample processing. In the block processing part, we discuss convolution and several ways of thinking about it, transient and steady-state behavior, and real-time processing on a block-by-block basis using the overlap-add method and its software implementation.
