Wikipedia

The guidelines to be followed during the creation of Integration Test Plans are:

- The number of new units or tasks to be tested by one Test Plan should not exceed five.
- To minimize the number of test cases, combine test cases into one if they test the same interface point.

Integration Testing INTEGRATION

TESTING is a level of software testing where individual units are combined and tested as a group. The purpose of this level of testing is to expose faults in the interaction between integrated units. Test drivers and test stubs are used to assist in Integration Testing.
