These forces vary in magnitude and direction with time and throughout space so that the theory is a heavy user of vector, differential, and integral calculus.

4 Classical Electromagnetic Theory Solution: The boundary of the integration over the charge distribution is most easily accommodated by working in cylindrical polar coordinates. The field point is located at z^k and the source points have coordinates r and θ giving $r^2 = z^k r \cos\theta + r^2 \sin^2\theta$.

Classical Electromagnetic Theory (Fundamental Theories of Physics) Jack Vanderlinde. This book claims to bridge the gap between undergrad book and Jackson's. But I do not find it achieved the goal. It contains some good sections and I use it only as a secondary book. I still have to use Jackson's as my primary source.
