Solutions to the exercises. Appendix. Index of data sets. Index of examples. General index. Learning outcomes. This material is taken from a discontinued Open University course. It is intended for re-purposing and re-use by educators rather than for use directly by learners. Learning outcomes appropriate to the original course may be provided ...

Module Reviews - Open University

The set of numbers for which a function is defined is called its domain. The set of all possible numbers $f(x)$ as x runs over the domain is called the range of the function. The rule must be unambiguous: the same x must always lead to the same $f(x)$. For instance, one can define a function f by putting $f(x) = p \cdot x$ for all x .

OpenIntro Statistics

The secret is of course to work through as many activities and exercises as possible, over and over again, and this is one area where the course stands out - there are a great many available to work through. Tutors even provided unofficial solutions to past exam papers, which was really helpful.

Elements of statistics: View as single page - open.edu

This wiki provides unofficial solutions to past Open University examinations. Stress the word unofficial; the Open University do not release official solutions, so the ones on this wiki are all generated by students or other volunteers. The solutions are not guaranteed to be correct or complete...
