Where to Stargaze - Night Skies (U.S. National Park Service)

Sky Guide is an astronomy app for sophisticated star enthusiasts and hobby astronomers who value well-founded and precise astronomical illustrations and data. The basic app function displays a detailed, scalable and fully user-configurable celestial map with constellations and celestial objects (limit magnitude up to 6.3) that are visible with the naked eye or smaller telescopes.

GuideStar nonprofit reports and Forms 990 for donors ...

Of course, many of the constellation names are more modern -- Telescopium, the telescope, being a rather obvious newcomer. In fact, by the 19th century the night sky had become crowded with overlapping and often contradictory constellation boundaries and names as different schools of astronomy prepared their own versions of star maps.

Stargazing Guide

Venus begins the year as the Evening Star, the brightest object in the night sky other than the Moon, standing well up in the west as night falls. The next-brightest object, the planet Jupiter, climbs into view in the eastern dawn sky during the month, and is in good view by month's end.
