LibGen is a unique concept in the category of eBooks, as this Russia based website is actually a search engine that helps you download books and articles related to science. It allows you to download paywalled content for free including PDF downloads for the stuff on Elsevier's Science Direct website. Even though the site continues to face legal issues due to the pirated access provided to books and articles, the site is still functional through various domains.

How to Place Stereo Speakers for the Best Sound

You get the brightest sound when the speakers point directly at you but it can often be preferable for them to be angled so that the axis of an imaginary line coming from the speakers crosses in front of or behind your head.

Hi-Fi Simplify: Guide to stereo speaker placement

Small speakers should be on stands or a bookshelf so that their tweeters are near your ear level and their backs near to the wall. If they have an air vent on the back, they should be kept at least a few inches from the wall. Tower speakers should be placed about 2' (or more) from the back wall. Avoid corners.

A step-by-step guide to the basics of speaker placement

Music is generally released in stereo, which means the sound is spread between the left and right speakers. Positioning the speakers at a 60-degree angle gives you the best 'stereo image' of these...

Loudspeaker Placement Guide | Audioholics

Precision alignment of the distance between the speakers will be determined by the distance to your listening position, the particular speaker you own and, to a great measure, your own personal preference. I generally prefer to start with an equilateral triangle, the apex of which is located at the listening position and the two speakers forming the base line (here, speakers placed 6' apart would suggest a listening position 6' away), and experiment to produce the best soundstage.

2-Channel Stereo Speaker Placement - Aperion Audio

According to Sumiko, "The most important component in any audio or theater system is the proper placement and positioning of the speakers into the listening environment. Putting the speakers where they truly belong, so they don't fight each other, so they work in total unison not only with each other but also with the room, is the end all be all for proper music reproduction in the home."

Cardas Room Setup & Speaker Placement Guide

A 9.1-channel system adds front height speakers to take advantage of Dolby Pro Logic® IIz, which derives height information from the signal. The configurations noted in this guide are illustrative. Dolby recommends that any overhead speaker installation be performed by professional installers with experience in installing overhead speakers.

Stereo Speaker Placement Guide

Position the speakers so that the distance between the front wall is 1/3 to 1/5 the length of the room. Doing so will prevent the speakers from creating standing waves and exciting room resonances (the peak and valley/null nodes when reflected frequency responses are in or out of phase with each other). Angle the speakers towards the listening position, just as with the golden rectangle rule above.

Stereo Speaker Placement for Optimum Sound - ecoustics.com

Most speakers need to be a minimum of a foot or two away from the side and back walls to reduce early reflections (early reflections reach the listener out of step with the direct sounds, causing image degradation). Distance to reflective surfaces, speaker radiation pattern and toe-in all contribute to the amount and intensity of early reflections.

SPEAKER PLACEMENT | Galen Carol Audio | Galen Carol Audio

Main Speaker Placement . As you will note from the graphics above, your main speakers should be placed between 22 and 30 degrees off from the main listening position. However, digging deeper, there are a few finer points on placing your main speakers worth mentioning.

Speaker Placement for Home Theater Surround Sound

Speaker Placement Guide Speaker Placement In A Space & Room Acoustic Treatment Looking for the best possible sound, a large number of audiophiles seeks to enhance the sound with a frequent replacement of system and/or its parts,.

In-wall and Ceiling Speakers Placement Guide

Front and in-ceiling speakers are total fine in placement, the problem comes from my surround speakers. According to Dolby's recommended placement, surround speakers should be placed just behind the listening position and range from 90 to 110 degree (from the center line).

The Art of Positioning Speakers | Cambridge Audio

The configurations noted in this speaker setup guide are illustrative. Left, Center, and Right Speakers Left, center, and right speakers help sound follow action across the TV screen, especially with music, dialogue, and special effects. Left and right speakers should be equidistant from both the screen and you.

5.1 Surround Speakers Setup | Dolby Laboratories

Speaker Placement for Surround Sound Surround sound means a sound that surrounds the listener from a complete angle of 360°. Actually, everyone loves the best sound system. Surround sound provides a home theater environment.

Speaker Placement for Surround Sound - 9 Best Options

The importance of symmetrical speaker placement in a small room cannot be over emphasized. Once the speakers are set as close to perfect as possible, you must angle them slightly toward the listening position. This can be done by ear and usually a 1/4 to 1/2 inch tweak will do. Box speakers generally require a bit more toe-in than planear speakers.

Speaker Setup Guide

SPEAKER PLACEMENT FOR 2-CHANNEL STEREO SYSTEMS When setting up speakers for a 2-channel speaker system, the two speakers and the listener's head should form the three points an equilateral triangle. The listening position is determined by the "center to center" distance of the speakers from each other and the distance to the listener's head.
