Raft foundation - Designing Buildings Wiki

When raft foundation is founded on sand, differential settlement governs the design but this is determined by the strength and stiffness of the raft structure and is very difficult to assess. Accurate estimations of all types of loads, moments, and forces are needed for the present as well as for future expansion.

Raft Foundation - When to Use, Types, Construction - Civil ...

Structural Design of Raft Foundations. For a successful design, the layout of mat foundation should be carried out with due consideration of both settlements and bearing capacity . For example, the flat slab analogy which has been very successfully used in many cases has also led to structural failures in many other cases due to lack of understanding of the basics.

Design of Raft Foundations - Methods and Calculations

The raft foundation design with step wise procedure are as given: As per IS 1893: 1 Cl 6.3.5.2 allowable bearing pressure in soil can be increased depending upon type of foundation thus bearing capacity of soil is increased by 50% assuming it will be Raft foundation. Then, $q = 1.5 \times 150 = 225 \text{ kN/m}^2$ and applying factor of safety of 1.2, $q = 187.5 \text{ kN/m}^2$

Various techniques of modelling the soil and structure are outlined, as is the method of coupling the foundation structure to a layered soil continuum. The general approach to design is also discussed, and summaries are given of eight structural design projects ranging from simple strip footings to complex raft foundations. J.A. Hooper
