sity of the system. Thus, the scaling relation we arrive at is $(c;T) (T) ' 1+ c 3 s$ or $\log (c;T) (T) ' c 3 s$; (3) in the small pinning concentration limit. The above equation suggests that the ratio of relaxation times is directly related to the static length-scale. A careful scaling analysis will lead to the extraction of the same. Note that

Our coding system was designed to assign behavioral determinants of social ecological levels; where this did not occur, articles were coded as not describing targets at any social ecological level ($n = 26$). Codes were entered into an Access database and then converted for use with conventional statistical software for analysis.
