T53 Engine Manual

T53-L-13 Turboshaft Helicopter Engine. The T53-L-13 engine began production in 1966. A significant upgrade from the earlier T53-L-11 series it provides 1,400 shp (1044 kW). The T53-L-11 series only produces 1,100 shp (820 kW). In continuous use since production began in 1966, the T53-L-13 series is the most common T53 engine.

DISTRIBUTED BY: ..., National Technical Information Service ...

Entering into production in the late 1950's the HU-1A was quickly revised into the HU-1B with larger main rotor blade system and a larger cabin. The powerplant was also upgraded from the T53-L-1 turboshaft engine to a 960 shp (716 kW) T53-L-5 engine and later an 1,100 shp (820 kW) T53-L-11 engine.

T53-L-703 - Fixed-wing, Rotor-wing, and Turbine Engine Support

The T-53-L-13 engine is a Free Power type turbine. Free power indicates that engine operation involves two mechanically independent internal stages (systems). The compressor rotor and gas producer turbine rotors makeup the n 1 stage, and the power turbine rotors with their output power shaft makeup the n 2 stage. The symbol ' n ' refers to rotation (rpm) of the two independent stages.
