TCP/IP uses a numeric addressing scheme in which each node is assigned an IP address that is used to route packets to a node on the network. Because it is much easier for people to remember names such as `www.somedomain.com` instead of `10.1.1.1`, a protocol called Domain Name System (DNS) is used to map numbers to names, and vice versa.

TCP/IP Help - Xerox

Transmission Control Protocol/Internet Protocol (TCP/IP) enables communication between machines with configured addresses. Part of the burden a network administrator must face is address assignment and parameter distribution for all machines on the network.
