If we replace the words electromagnetic, electric, magnetic with gravity we can deeper understand Tesla's work on that line: "The theory I propose may therefore be called a theory of the Electromagnetic Field, because it has to do with the space in the neighbourhood of the electric or magnetic bodies, and it may be called a Dynamical Theory, because it assumes that in that space there is matter in motion, by which the observed electromagnetic phenomena are produced."

In 1897, when Tesla presented his Dynamic Theory of Gravity, he said that all bodies emit microwaves whose voltage and frequency are determined by their electrical contents and relative motion. Over one hundred years ago, Nikola Tesla managed to measure the microwave radiation of our planet and concluded that it is only a couple of centimeters in wavelength.

My theory on gravity is that it is a summation of the infinite particle's attraction that compose the Earth. I will use the derivative and integral definitions to really get more of a sense of what I think gravity is. So if we take the planet earth's primary composition is atoms. That is the base.
