1. Introduction. While the importance of ancient animal bones for understanding human prehistory was recognized by some as early as the 1700s -- especially in establishing that humans even had a prehistory (Grayson, 1983) -- early examples of faunal analysis, the study of ancient animal remains, are few and far between. As the discipline of archaeology grew in the following centuries, the ...

Zoo-archaeology (or archaeo-zoology), also known as faunal analysis, is a branch of archaeology that studies remains of animals from archaeological sites. Faunal remains are the items left behind when an animal dies. These include bones, shells, hair, chitin, scales, hides, proteins and DNA. Of these items, bones and shells are the ones that occur most frequently at archaeological sites where ...
