*The Cognitive Animal: Empirical and Theoretical ...*  
Comparative cognition is the field of inquiry concerned with understanding the cognitive abilities and mechanisms that are evident in nonhuman species. Assessments of animal cognition have a long history, but in recent years there has been an explosion of new research topics, and a general broadening of the phylogenetic map of animal cognition.

Animal Behavior and Cognition

shaping children's cognitive skills evolved to solve adaptive problems they faced in ancestral environments, and tries to deduce through a combination of the logic of adaptive design and empirical evidence what these mechanisms might be. Because encounters with animals loomed larger in children's lives in the past, it is perhaps not
