String Art and Geometric Inspiration

When a massive astrophysical object, such as a boson star or black hole, rotates, it can cause the surrounding spacetime to rotate along with it due to the effect of frame dragging. In a new paper, physicists have shown that a particle with just the right properties may stand perfectly still in a rotating spacetime if it occupies a static orbit -- a ring of points located a critical distance ...

The true beauty of sacred geometry is that it satisfies both the right and left brain. Elegant expressions of compelling proportional relationships simultaneously activate the intellectual and artistic functions, merging the rational with the abstract. Sacred geometry arises from the desire to express philosophical truths through concrete means.*

Sacred Geometry Mandalas - Dancing Moon Designs

All matter is composed of a symphony of interrelated waves. These waves oscillate back and forth from time/space to space/time creating interference patterns. The interference patterns create (by the very nature of reality) geometry upon which vortices of photons, subatomic particles, atoms, molecules and cells coalesce upon.

How Dandelion Seeds Float Seemingly Impossible Distances

or a spadeful of spacetime. It is a truism that what is now our present will become, in our future, someone else's past. What may not be so obvious, as this sharp story by Roger Zelazny illustrates, is that no matter how intensely personal the connection, even unto life and death, the alienation can be vast.

'Cosmos: A Spacetime Odyssey': Seth MacFarlane explains ...

Each dandelion seed is attached to a bundle of roughly 100 feathery bristles known as a pappus, whose name derives from an ancient Greek word for grandfather due to its resemblance to a beard. This structure prolongs the descent of seeds by dragging on the air a bit like a parachute, ensuring that horizontal winds can help carry the seeds

farther.

*The connection with "Sacred Geometry" that has to do with so-called
free or zero-point energy is that both of these symbols represent a
"flat" view of a three dimensional object. If a person can not "see"
pictures in their "mind's eye" then they may not be able to "imagine"
what something might look like if "rotated" three-dimensionally.*
