Lymphatic system - Wikipedia

The Lymphatic System. The lymphatic system absorbs fats and fat-soluble vitamins from the digestive system and delivers these nutrients to the cells of the body where they are used by the cells. The lymphatic system also removes excess fluid, and waste products from the interstitial spaces between the cells.

Lymphatic System

The lymphatic system consists of open-ended vessels, lymph nodes, and organs such as the tonsils, spleen, and thymus. Unlike the blood vascular system, lymphatic circulation is not a closed loop. It creates a one-directional flow of lymph towards the heart. Lymph reenters the cardiovascular system at subclavian veins situated near the neck.

Lymphatic system: Definition, anatomy, function, and diseases

The lymphatic system's primary function is to absorb and transport throughout the body. The lymphatic system functions in parallel to the
