Polycyclic aromatic  
hydrocarbon -

Wikipedia

# Where To Download The Potential

Lignocellulose refers to plant dry matter (C<sub>6</sub>H<sub>10</sub>O<sub>5</sub>), so called lignocellulosic biomass. It is the most abundantly available raw material on the Earth for the production of biofuels, mainly bio-ethanol. It is composed of carbohydrate polymers (cellulose, hemicellulose), and an aromatic polymer (Lignin).
