addressing the most challenging problem of our time: human survival."

### **Review of The Psychology of Environmental Problems**

Yes, the tenets of environmental psychology you have outlined are important, but I think we're facing bigger and more complex issues than the psychological profession are willing to address. I took my PhD in environmental psychology (EMF/ELFs), am researching radon risk communication, taking an MSc in Health Psychology and have experience in corporate psychometrics, communications & training.

## **Environmental psychology - Wikipedia**

psychological predispositions influence people's willingness to engage with environmental issues and behave in pro-environmental ways (17). We go on to consider how people build on these existing predispositions to develop mental models of environmental problems, especially those of a dynamic nature.
