A Tour of the Periodic Table A Tour of the Periodic Table Mr. Andersen describes the major groups on the periodic table.*

Tour Of The Periodic Table

What Is the Periodic Table? The periodic table is made up of several squares arranged into columns (called groups) and rows (called periods), with each square representing one chemical element. The groups and periods have specific properties that we'll discuss in a future episode, but today I want to talk about the information inside each square.

the total number of protons plus neutrons

Periodic table - Wikipedia

Heres a wordbank: Main-group elements Halogens Metals Transition metals Alkaline earth metals Alkali metals Hydrogen Noble gases These can be used more than once 1. The _____ have a single electron in the highest occupied level. 2. The _____ are in the s- and p- blocks of the periodic table. 3.

A Tour of the Periodic Table - The Good Men Project by Lee Falin, PhD. In Part 1 of this series on the periodic table, we looked at the information contained in each block of the periodic table of the elements. These included things like the atomic number, chemical symbol, and atomic weight of each element. I also mentioned that these blocks of elemental information are arranged in columns called groups and rows called periods.
