A "unit process" is one or more grouped operations in a manufacturing system that can be defined and separated from others. In life-cycle assessment (LCA) and ISO 14040, a unit process is defined as "smallest element considered in the life cycle inventory analysis for which input and output data are quantified". See also. Unit Operations and Processes in Environmental Engineering ...

Large processes are broken into unit operations in order to make them easier to analyze. The key thing to remember about them is that the conservation laws apply not only to the process as a whole but also to each individual unit operation. The purpose of this section is not to show how to design these operations (that's a whole other course) but to give a general idea of how they work. Separation Processes

What is the difference between unit operation and unit process

and Unit Process (chemical treatment) to produce economically a desired product from specific raw materials. The raw materials are treated through physical steps to make it suitable for chemical reaction. So, knowledge of unit operations like ' Mixing and agitation of liquid ' and ' heat flow ' is very much necessary. The subject Unit Operations is based on fundamental laws, physicochemical principles. Unit
