Diego Galar, Uday Kumar, in eMaintenance, 2017. 5.2.2.2.3 Fuzzy Rule-Based Systems. FRBS use fuzzy logic for inference. Fuzzy logic is based on fuzzy set theory in which binary set membership has been extended to include partial membership ranging from 0 to 1 (Zadeh, 1965). Fuzzy sets, in contrast to their crisp counterparts, have gradual transitions between defined sets; this allows the ...

Creating motion using the rule of thirds. Asymmetry in design is a good thing, but when your design focuses more on one side of the canvas and neglects the other, it can create a sense of motion in your design. This can be either beneficial or harmful to your design, ...

### Using Design Tables in SOLIDWORKS - Engineers Rule

This article proposes to convert design methodologies studied by designers into rule-based computational design software and help them by providing suggestions for designs to build upon given a set of primitive shapes and geometrical rules. iPattern is a pattern-making software dedicated to designers to generate innovative design patterns that can be used in a decorative manner.

Plant synthetic biology requires software tools to assist on the design of complex multi-genic expression plasmids. Here a vector design strategy to express genes in plants is formalized and implemented as a grammar in GenoCAD, a Computer-Aided Design software for synthetic biology. It includes a library of plant biological parts organized in structural categories and a set of rules describing ...

When rule 1 is finished, rule 2 should then start to validate etc By using a state diagram, you get multiple rules and specific action sequences via states and state transitions Every separate rule (for example: can only move 1 square, can only move diagonally etc) must be in its own class and must be reusable and applicable on the objects that need rules.

### Rule-Based Design of Plant Expression Vectors Using GenoCAD

In electronics engineering, a design rule is a geometric constraint imposed on circuit board, semiconductor device, and integrated circuit (IC) designers to ensure their designs function properly, reliably, and can be produced with acceptable yield. Design rules for production are developed by process engineers based on the capability of their processes to realize design intent.

Design guidelines are rules of thumb for you to create work which never frustrates users. Likewise, you should also cater to users who have a wide range of disabilities. How you apply design guidelines also depends on the contexts of use, your design's platform and the type of interaction users will have with it (e.g., voice-controlled).
