Discounted Cash Flow (Part 1 of 2): Valuation

The concept of DCF valuation is based on the principle that the value of a business or asset is inherently based on its ability to generate cash flows for the providers of capital. To that extent, the DCF relies more on the fundamental expectations of the business than on public market factors or historical precedents, and it is a more theoretical approach relying on numerous assumptions.

DCF valuation models: Have you updated for IFRS 16? | The ...

In contrast with market-based valuation like a comparable company analysis, the idea behind the DCF model is that the value of a company is not a function of arbitrary supply and demand for that company's stock. Instead, the value of a company is a function of a company's ability to generate cash flow in the future for its shareholders.

Discounted Cash Flow (DCF) Analysis - Macabacus

Discounted Cash Flow (DCF) formula is an Income-based valuation approach and helps in determining the fair value of a business or security by discounting the future expected cash flows. Under this method, the expected future cash flows are projected up to the life of the business or asset in question and the said cash flows are discounted by a rate called the Discount Rate to arrive at the Present Value .
