Using Choice Experiments to Value the Environment ...

The limitations of ex ante valuation using stated-preference methods and real choices are not limited to large-scale, threshold effects. There are many common instances in which people may not have experienced an ecological improvement or degradation and revealed-preference valuation methods are not applicable.

Combining Revealed and Stated Preference Methods for ...

Some nonmarket valuation methods use observable expenditure on a different marketed good or service to draw an inference about the value of the nonmarketed environmental attribute of interest. For example, housing prices may reflect the increased willingness to pay for housing in locations with better environmental amenities, such as access to lakes and parks or better air quality.

Valuing environmental amenities using stated choice ...

As part of an Environmental Impact Report, the State hired a consulting firm to perform a more detailed contingent valuation survey. This new survey involved the use of photo-simulations showing what the lake would look like at alternative water levels.
