You may also have to reconfigure LLT when adding nodes to a cluster. See the llttab(4) manual page. See the Veritas Cluster Server User's Guide. Each component in SFCFS registers with a membership port. The port membership identifies nodes that have formed a cluster for the individual components. Examples of port memberships include the following:

I'm planning to setup a two node active-active cluster (with a shared storage) for a JMS application on Websphere MQ using Veritas Cluster Server (VCS). By active-active, I mean both of them will be servicing incoming traffic simultaneously. My JMS application and Websphere MQ can load balance traffic on their own.

## Veritas Cluster Server User's Guide

This module provides basic guidelines for the Veritas Cluster Server (VCS) configuration in a Subscriber Manager (SM) cluster installation. It assumes basic knowledge of the VCS environment; it does not replace the
