Types of Rock: We have 3 main types or classes of rock based on how they are formed. These are; igneous rock, sedimentary rock and metamorphic rock. IGNEOUS ROCK. Igneous rocks are formed when molten substances below the earth surface cools down and solidifies. These molten substances are called magma or lava. Magma can be derived from melting of existing

Diagenesis of Volcanic Rocks  
and its Effects on Evolution

...

Volcanic rock (often shortened to volcanics in scientific contexts) is a rock formed from lava erupted from a volcano. In other words, it differs from other igneous rock by being of volcanic origin. Like all rock types, the concept of volcanic rock is artificial, and in nature volcanic rocks grade into hypabyssal and metamorphic rocks and constitute an important element of some sediments and ...
