Aqueous biphasic systems - London South Bank University

Aqueous biphasic systems (ABS) or aqueous two-phase systems (ATPS) are clean alternatives for traditional organic-water solvent extraction systems.. ABS are formed when either two polymers, one polymer and one kosmotropic salt, or two salts (one chaotropic salt and the other a kosmotropic salt) are mixed at appropriate concentrations or at a particular temperature.

“Water and Aqueous Systems” The Water Molecule: a Review Water is a simple tri-atomic molecule, H_2O Each O-H bond is highly polar, because of the high electronegativity of the oxygen (N, O, F, and Cl have high values) bond angle of water = 105° due to the bent shape, the O-H bond polarities do not cancel. This means: water is a polar molecule. The Water Molecule: a Review ? is the ...

Water is an intense absorber in the NIR, requiring small optical paths to make useful measurements. These small paths may plug or entrain bubbles. The spectral signals in aqueous systems also change considerably with temperature. Guided Wave has selected one wavelength at 1290 nm for calibration of NaOH that best addresses these issues. The ...
