Yes, many may argue on the tradition of reading books made of paper, the real feel of it or the unusual smell of the books that make us nostalgic, but the fact is that with the evolution of eBooks we are also saving some trees.

5 Protocols For Event-Driven API Architectures | Nordic APIs

In a nutshell, a Webhook is a different approach from your typical Web API. As opposed to the usual RESTful API deployment where a server hosts an HTTP-based API endpoint that clients (the "API consumers") pull data from one request at a time, Webhooks reverse the direction of the conversation.

Introduction to The Events Calendar REST API
SendGrid has two distinct webhooks related to each direction that email flows: Event Webhook provides data about the emails you send, such as bounces and when the recipient clicks a link.; Inbound Parse Webhook allows your application to receive email as soon as a message comes in.; Some non-SendGrid webhooks: Twilio's webhooks send text messages and voice calls to your application.

Get notifications about your Uploadcare events via webhooks. For instance, once a file gets uploaded to your project, we can notify you by sending a message to a provided URL. Find more info in Uploadcare Docs.

REST API Webhooks | Uploadcare Docs
Polling an API is generally a wasteful and messy way of trying to retrieve that piece of information. Some events may only happen once in a while, so you have to figure out how often to make the polling calls, and you might miss it. Don't call us, we'll call you! Well webhooks are the answer.

Webhooks Events For Restful Apis
The good thing: we can engineer RESTful APIs that support events with a webhook infrastructure. The bad thing: it requires some heavy lifting. The infrastructure needs to be developer-friendly, easy to use, reliable, secure, and highly available. Best Practices for Webhooks. Webhooks are a collection of best practices for supporting events in a RESTful architecture. But what exactly are the best practices?
