GAS WELDING AND CUTTING. Oxy-fuel welding, commonly referred to as oxy welding or gas welding is a process of joining metals by application of heat created by gas flame. The fuel gas commonly acetylene, when mixed with proper proportion of oxygen in a mixing chamber of welding torch, produces a very hot flame of about 5700-5800 °F.

CHAPTER-I INTRODUCTION 1.1 DEFINITION OF WELDING. "Welding is the process of joining together two pieces of metal so that bonding takes place at their original boundary surfaces". When two parts to be joined are melted together, heat or pressure or both is applied and with or without added metal for formation of metallic bond. 1.2 NEED FOR WELDING.

designation for this welding method. According to DS/EN 24063 this welding process has number 141. The Principle of TIG Welding TIG welding is an electric arc welding process in which the fusion energy is produced by an electric arc burning between the workpiece and the tungsten electrode. During the welding process the electrode, the arc

Oxy Acetylene Gas Welding Generally acetylene is used as fuel gas. It is called Oxy acetylene welding. Combustion of oxygen and acetylene (C₂H₂) in a welding torch produces a temp. in a two stage reaction. In the first stage C₂H₂ + O₂ → 2CO + H₂ + Heat This reaction occurs near the tip of the torch.

TIG welding – Method and Application

Filler material is typically added to strengthen the joint. • Welding is a dependable, efficient and economic method for permanently joining similar metals. In other words, you can weld steel to steel or aluminum to aluminum, but you cannot weld steel to aluminum using traditional welding processes.

Welding involves localized coalescence or joining together of two metallic parts at their faying surfaces. The faying surfaces are the part surfaces in contact or close proximity that are to be joined. Welding is usually performed on parts made of the same metal, but some welding operations can be used to join dissimilar metals.

Resistance spot welding (RSW) is a process in which contacting metal surface points are joined by the heat obtained from resistance to electric current. It is a subset of electric resistance welding.. Work-pieces are held together under pressure exerted by electrodes. Typically the sheets are in the 0.5 to 3 mm (0.020 to 0.118 in) thickness range.
