How to Avoid Pests and Diseases in the Garden | HGTV

There are many potential pests of pea plants, with aphids and pea weevils being the most prevalent. Aphids multiply rapidly and suck the sap of the plant, resulting in weak and stunted specimens. This also results in very few pods and possible disease contagion such as pea leaf roll and mosaic virus.

Crown gall rot (class Alphaproteobacteria: family Rhizobiaceae) *Agrobacterium rhizogenes* □ This disease is characterised by large lumps at the base of the plant stem or on roots. Galls may appear higher on stems as the disease progresses. Galls are soft compared to surrounding plant tissues. The pathogenic bacteria enter the plant via a wound. If the disease affects the plant whilst it is young the plant may be affected to the degree where it will not produce blooms.

Control Garden Pests & Diseases Using Natural Habitat ...

Plant pests are normally things with legs - or at least move, whilst plant problems can either be a fungal disease, environmental or physical problem. Diseases such as Fungi, do not move (visibly) whilst live insects do - even if only a few mm per hour as sometimes seems the case! Plant Disease problems - which are not 'pests' - are sometimes a little difficult to recognise - but don't worry, we are here to help. Plant diseases include

List of pests and diseases of roses -
Wikipedia

A pest is any animal or plant detrimental to humans or human concerns, including crops, livestock and forestry, among others. The term is also used of organisms that cause a nuisance, such as in the home. An older usage is of a deadly epidemic disease, specifically plague. In its broadest sense, a pest is a competitor of humanity.
