Lucas The Spider - Scary Stories  
Funnel Web Spiders. Funnel Web Spiders (Agelenidae) or grass spiders resemble wolf spiders but have a pair of long, distinctive silk spinning tubes at the rear of the abdomen. They build a horizontal, sheet-like web that has a funnel shaped retreat. These webs are most obvious when covered with dew in the morning.

The Importance of Spiders to an Ecosystem - mom.me  
Spiders (order Araneae) are air-breathing arthropods that have eight legs and chelicerae with fangs able to inject venom. They are the largest order of arachnids and rank seventh in total species diversity among all orders of organisms. Spiders are found worldwide on every continent except for Antarctica, and have become established in nearly every habitat with the exceptions of air and sea ...

Why spiders have so many eyes - CBS News  
Most spider species are generalists and have long generation times in comparison to prey, ergo there are no natural control species of spiders per se, according to the University of Michigan. This means introducing a given type of spider to an area -- or removing it -- can have little to no effect on most ecosystems.

Why Anansi Has Eight Thin Legs (fable story) - Africa for Kids  
The evolution of spiders has been going on for at least 380 million years, since the first true spiders (thin-waisted arachnids) evolved from crab-like chelicerate ancestors. More than 45,000 extant species have been described, organised taxonomically in 3,958 genera and 114 families. There may be more than 120,000 species.
