The BMJ reveals worrying cuts to UK medical schools
Catastrophic haemorrhage or carotid blowout a rare but devastating consequence of head and neck cancer. In most cases, this represents a terminal event, and the patient is prescribed pre-emptive analgesia and anxiolytics. There is anecdotal evidence that due to the time taken to prepare the medications that patients do not receive these drugs prior to death.

Management of catastrophic haemorrhage in palliative head ...

Some patients with aggressive NECs only survive a few months from the time of diagnosis, while some patients who have stage IV metastatic small intestinal NETs can survive two decades with good quality of life on treatment.¹ The site of primary tumour is important with type I and II gastric, appendiceal and rectal NETs having excellent prognosis at similar stages compared with small intestinal ...

It now includes valuable words of wisdom written by junior doctors for BMJ Careers and Student BMJ. Good luck with the new job. I'm sure you, like most, will

Whose life to save? Scarce resources allocation in the ...

In the current COVID-19 pandemic, governments mandate social distancing and good hand hygiene, but little attention is paid to the potential impact of diet on health outcomes. Poor diet is the most significant contributor to the burden of chronic, lifestyle-related diseases like obesity, type 2 diabetes and cardiovascular disease.¹ As of 30 May 2020, the Centers for Disease Control and ...

COVID-19 and medical professionalism in a pandemic ...

Key ethical challenges for healthcare workers arising from the COVID-19 pandemic are identified: isolation and social distancing, duty of care and fair access to treatment. The paper argues for a relational approach to ethics which includes solidarity, relational autonomy, duty, equity, trust and reciprocity as core values. The needs of the poor and socially disadvantaged are highlighted.

Will medical tourism survive covid-19? | The BMJ

The airborne route is a potential pathway in the person-to-person transmission of bacterial strains among cystic fibrosis (CF) populations. In this cross-sectional study, we investigate the physical properties and survival of common non- *Pseudomonas aeruginosa* CF pathogens generated during coughing. We conclude that Gram-negative bacteria and *Staphylococcus aureus* are aerosolised during ...

After initially emerging in China, the coronavirus (COVID-19) outbreak has advanced rapidly. The World Health Organization (WHO) has recently declared it a pandemic, with Europe becoming its new epicentre. Italy has so far been the most severely hit European country and demand for critical care in the northern region currently exceeds its supply. This raises significant ethical concerns, among ...

Neuroendocrine tumours: what gastroenterologists need to ...

In health outcomes terms, the poorest countries stand to lose the most from these disruptions. In this paper, we make the case for a rational approach to public sector health spending and decision making during and in the early recovery phase of the COVID-19 pandemic. Based on ethics and equity principles, it is crucial to ensure that patients not infected by COVID-19 continue to get access to ...

Letters seen by The BMJ show medical schools asking staff to consider voluntary pay reductions, early retirement, redundancy, or changes to clinical academic contracts to cope with budget constraints.

Commentary - A nursing journal by BMJ

Introduction Severe acute malnutrition (SAM) and disability are major global health issues. Although they can cause and influence each other, data on their co-existence are sparse. We aimed to describe the prevalence and patterns of disability among a cohort of children with SAM. Methods A longitudinal cohort study in Malawi followed SAM survivors up to 7 years postdischarge. Clinical and ...
