### **cardiac muscle | Definition, Function, & Structure ...**

The heart is an amazing muscle that beats around 100,000 times a day. It is essentially a complex pump that is able to adjust blood pressure, flow, and volume in order to provide your body with all the blood it needs. Your heart is constantly adjusting to what you are doing and the state of your body.

### **Carly Rae Jepsen - Your Heart Is A Muscle (with lyrics)**

The muscle that makes up the heart is called cardiac muscle. It is also known as the myocardium (say: my-uh-KAR-dee-um). The thick muscles of the heart contract to pump blood out and then relax to let blood back in after it has circulated through the body.

### **Cardiac muscle - Wikipedia**

**Cardiac Muscle Definition.** Cardiac muscle, also known as heart muscle, is the layer of muscle tissue which lies between the endocardium and epicardium. These inner and outer layers of the heart, respectively, surround the cardiac muscle tissue and separate it from the blood and other organs. Cardiac muscle is made from sheets of cardiac muscle cells.
